

SAAS Developer Role

Based in Glasgow and Ayr, Ammu was formed in 2020 by Chartered Accountant Simon Murrison and Jane Grant a Chartered Management Accountant. Jane and Simon successfully combined two innovative, digitally led practices with complementary skills and shared values, all under one name – Ammu. Ammu is built on the foundations of decades of experience from Amas, founded in 2002, and Murrison & Wilson founded in 2013.

We help our clients to find out more about what is going on in their business finances and we help them to use this information to make better, more informed decisions that leads to improved profitability, greater returns and a better rewarded and a more motivated workforce. Ultimately, we help our clients to achieve more, and we help them to do this at a pace they are comfortably with and is line with their objectives.

We provide a range of services and advice to businesses, company directors and private individuals, including:

- Statutory accounting, tax planning and compliance
- Business funding – securing growth funding for clients e.g. debt, grants, equity, alternative finance, with a particular specialism in securing R&D Tax Credits funding.
- Business strategy and planning – development and implementation
- Business succession planning and exit planning
- Digitisation of financial and management systems
- Intelligent Management Information – providing improved management and financial reporting weekly, monthly, quarterly, bi-annual and annual budget setting/KPI setting/target setting

About SAAS Developer Role

We require a suitably qualified developer for a minimum one year contract to develop a new financial saas application. An understanding of company financial information and the importance it plays in operational and commercial decision making in SMEs would be preferred but it is not essential as a full support will be provided by ammu's team of chartered accountants and management accountants.

Experience & Requirements

We would anticipate the candidate will also have coding skills, this includes a good working knowledge of CSS and HTML (essential) with Javascript and jQuery (desirable).

- Bachelor's degree in computer science, information technology, or equivalent with strong language and communications skills.
- Minimum 3 years of previous project management experience managing software development & project experience in Cloud Platforms and API calls/interactions as well as Sprint / Scrum or similar modern Dev Ops frameworks.
- Solid understanding of the technical aspects of online applications, security, web development, digital infrastructure, development frameworks and tool sets.
- Self-starter with strong business judgement who can initiate action and follow through with well defined solutions and action plans.
- (Highly desirable) UX / UI designer and developer to also have coding skills and strong knowledge of CSS, HTML5, Javascript and jQuery
- Experience of 5+ Years in Software Development
- Agile PM / Prince2 experience a plus
- The ability to effectively communicate technical concepts to non-technical clients including providing training.
- Previous Cloud/API integration experience on complex secure integrated platforms.
- Professional experience utilising contemporary testing methodologies as well as quality assurance (secure coding principles and similar).

Further Information

- The role is for a 12 month project
- Salary between £30,000-£40,000 Depending on experience

How to apply
